3+ Years Experience | 6+ ETG Titles Shipped | 100+ Terminals Deployed Internationally

PROFILE

Software Engineer with 3+ years at Light & Wonder, building Unity games, C#/.NET backend systems, and platform components for electronic table gaming products deployed in international casino markets. Progressed from intern to Senior Associate Software Engineer in under two years. Sole owner of Tournament Display — the platform's first server-driven, video-integrated display overlay.

TECHNICAL SKILLS

Core: C#, Unity, .NET Framework, WPF, C++, C

Domain: Client-server integration, Game design, Game logic, Rapid prototyping

Additional: Python, JavaScript, SQL, Unity WebGL, Node.js, React, Three.js

Tools & Practice: Git, Perforce, Visual Studio, Jira — profiling, memory analysis, log-based debugging

PROFESSIONAL EXPERIENCE

Senior Associate Software Engineer | Light & Wonder

Mar 2025 – Present

- Designed and delivered **Tournament Display** — the platform's first server-driven, video-integrated display overlay, with cross-game state sync, a live leaderboard, and an animation layer — enabling casino operators to upload custom images and video playback, turning tournament screens into an operator-controlled marketing surface.
- Own end-to-end feature delivery across Unity clients and C#/.NET applications, from technical planning through integration, QA coordination, and release sign-off.
- Primary engineering contact** for Tournament systems and Ultimate Texas Hold'em across 5+ stakeholder groups in India, Australia, and the US.
- Resolve production defects across client, server, and platform layers using profiling, memory analysis, and protocol-level (TCP/IP) diagnostics.
- Delivered titles on **100+ casino terminals** across new international markets; led AI-assisted ideation sessions that cut concept-to-prototype time and removed multi-week alignment cycles.

Engineering Initiatives

- Game Ideas & Prototyping Portal (Unity WebGL · Python · Three.js)** — browser-based platform hosting 10 game concepts; cut concept validation from 2 months to 2 weeks.
- QR-Based Player Feedback System (Node.js · React · Unity)** — QR-triggered feedback workflow for ETG cabinets with admin panel and automated Confluence sync; replaced informal feedback with compliance-ready records.
- AI Ideation Dashboard (Node.js · HTML)** — studio-wide platform to capture and track AI-driven ideas with manager-level weekly reporting.

Associate Software Engineer | Light & Wonder

Jul 2023 – Mar 2025

- Progressed from **C/C++ platform components** (sockets, IPC) to C#/.NET server-side engineering to Unity client development — demonstrating cross-stack adaptability across every layer of the product.
- Self-taught Unity in production; delivered Ultimate Texas Hold'em as a full production-quality Unity client within a single project cycle — **zero prior Unity experience**.
- Delivered **6+ ETG titles** on schedule: Ultimate Texas Hold'em, Roulette & Variants, Roulette POD, Craps, Baccarat & Variants, Sic Bo, and SBJ Tournament.
- Resolved performance bottlenecks via profiling, FPS and memory analysis, and runtime log review with QA and server teams.

Software Engineering Intern | Light & Wonder

Feb 2023 – Jun 2023

- Built automated test suites using Robot Framework; **converted to full-time within 5 months** based on performance.

EDUCATION

B.E. in Information Science & Engineering · 2019 – 2023 · CGPA: 8.5/10 · Dayananda Sagar Academy of Technology & Management, Bengaluru

Certifications: Machine Learning & Python (Internshala) · C++ (Cisco Networking Academy) · C# (LinkedIn Learning) · SQL (HackerRank)

Languages: English (Professional) · Kannada (Native) · Hindi (Professional)
